

Crutch Caddy

GIVING INDEPENDENCE

From a safety and convenience aspect, crutches are standing ready for you to slip your arms into instead of the usual position, propped up in the nearest corner or laying dangerously on the floor.

Crutches are a hazard and an inconvenience when not in actual use. The use of a **Crutch Caddy** in public settings such as hospital rooms next to beds, chairs or bathrooms in rehabilitation rooms, gyms and waiting rooms would reduce valuable nursing and assistance needed to retrieve crutches for patients and also give patients back some much wanted independence.

The same applies at home where a **Crutch Caddy** could be positioned at your bedside, in the bathroom, next to the dining table, television armchair or on the garden patio. This relieves carers and once again gives back some independence. The Crutch Caddy is lightweight and compact.

There is also the commercial aspect for workplaces, restaurants, beauty salons, waiting rooms and entertainment venues to mention a few.

Imagine a **Crutch Caddy** at work with you, keeping your crutches in a safe and convenient vertical position right by your side.

Weighing less than 800gms (1¾lbs) the Crutch Caddy slides easily across any floor surface.

Crutch Caddy

GIVING INDEPENDENCE

The unique **Crutch Caddy** may be positioned wherever the safe storage of crutches is required. By your bedside, in the bathroom or next to a comfortable chair. Lightweight and transportable, the **Crutch Caddy** provides you with easy access to your crutches, giving you independence and freeing up carer's time.

Using the Crutch Caddy couldn't be easier.

Insert the crutches into the two sockets in the dome, and locking arms hold the crutches in a vertical position ready to use.

To extract the crutches, simply lift out and the locking arms automatically release and retract back into the housing of the dome.

We stress the importance of using both arms to safely seat yourself and raise from seating.

*Standard rubber tip is based on 22mm aluminum tube base of tip 43mm.
